Slack Lite

- Created by: Preston Thomas & Evan Gronewold

Run Instructions

- **NOTE: This is assuming you have already fetched the remote repository on the GVSU RDPs**
- VPN into GVSU's network
- Run the following in the terminal: ssh userid@eos<##>.cis.gvsu.edu
- CD to the directory where the server.py script is located (example command: cd /cis457/cis457_group_chat/src
- Run the script (python3 server.py)
- On your local machine, open a new terminal window and enter: ssh -N -L 5000:localhost:5000 userid@eos<##>.cis.gvsu.edu
- To open the client, open another new terminal window (or run in VS Code, but since we will probably be presenting solo, terminal will be easiest to open multiple client sessions)
- CD to the directory on your local machine where the repository's src folder is located
- Run the client: python3 client.py
- Open as many clients as required for the demo and begin chatting!
